File Transfer Application

Team - File masters Duo

Tech Stack

Features

BASIC

- 1.Allow users to **create accounts** or **log in**.
- 2.Enable users to **upload files** either by dragging and dropping them.
- 3.Provide the ability for users to **download files** they have uploaded or files shared with them.
- 4.Allow users to **delete** files they have uploaded or files that they own.
- 5.Implement functionality for users to generate **shareable links** for their files.
- 6.Enable users to share files directly with others by sending them via **email** through the platform.

ADVANCED

- 1.Offer **file preview** functionality to allow users to preview files before downloading them.
- 2.To implement separate **error classes** to handle errors gracefully.
- 3.Implement granular user permission settings to **control** who can access, view, edit, or delete files.
- 4.Implementing various **security measures** to prevent attacks that happens while uploading files.
